

Where space is limited within a plant / control room, or for structural security with installations typically onboard an offshore rig we provide the following cost effective, practical and safe solutions for gaining internal access from the front of a control panel.

Gas Strut Assist

Safety stays are fitted as a standard feature to every assembly.

Mosaic Cassette

The panel front in which the display facia is fitted has the facility to be withdrawn from the panel upon telescopic slides mounted at a high level. This facility enables maintenance to be carried out to the rear of the display facia and/or on the equipment mounted internally within the panel. Opening and closing of the front facia is a 'one man' operation, even for facias several metres wide.
