

Workstations / Operator Desks

Data Sheet
WS01

Ergonomic and operational studies identify the best processes and operational methods that should be employed. Each case is unique and highlights the need for bespoke workstations that are designed to fulfil the specific requirements of the operators and organisation alike.

Managing the ergonomic needs of the team will reduce fatigue and the overall stress of the work environment. Operators are then more alert and free from distraction, improving the quality of decisions they make.

By working closely with clients and jointly considering potential future operational requirements, it is possible to “future proof” workstations. In addition to designing workstations that totally fulfil current needs, they can be designed for adaptation into different configurations as dictated by future process requirements.
